

Build a personal finance management application using Android language.

Bui Cong Han

Abstract: In the context of an increasing number of people using mobile technology to manage their lives, this topic focuses on building a personal finance management application based on the Android platform. The project's goal is to develop a system that helps users easily track and control daily expenses, thereby enhancing awareness of financial management. Through a combination of theoretical research and experimentation, the topic not only provides a technical solution but also offers practical recommendations for using the application in daily life. The expected results will contribute to the development of the mobile financial technology field and support users in managing their finances effectively.

Keywords: Android application, Personal finance management, Mobile financial technology
