

Build a phone sales website using ASP.NET MVC

Nguyen Hai Nam

Abstract: In the context of the rapidly growing e-commerce market, building a professional and efficient sales website system is an essential need. This project aims to design and implement a web system for selling phones using the ASP.NET MVC platform. The research method combines theory with experimentation, thereby providing optimal technical solutions for businesses. The expected outcomes of the project not only contribute to enhancing market competitiveness but also play an important role in developing web applications based on ASP.NET MVC.
