

Building a social network for mothers and babies

Nguyen Van Nhat

Abstract: In the context of the increasing demand for information and interaction among the modern mother and baby community, this topic focuses on building a specialized social network system. The goal is to create a platform that provides a healthy and safe interactive space for mothers and parents to share experiences and effective childcare information. The research method combines theory with experimentation, including competitor analysis and user-friendly interface design. The topic is expected to contribute to promoting a culture of learning through social networks and supporting the sustainable development of the early childhood education community.

Keywords: social network, mother and baby, information system, childcare, user interface
