

Building an open-source WordPress Pentest process

Bui Ngoc Son

Abstract: In the context of increasing attention to network security, this topic focuses on building a Penetration Testing (Pentest) process for the open-source WordPress. The objective of the research is to explore potential vulnerabilities and assess the security level of the system. The implementation method includes analyzing security theory and applying empirical testing with modern pentest tools. The expected results will provide the WordPress development community with an effective security testing process, contributing to improving the quality and safety of this platform.

Keywords: Pentest, Open source security, WordPress
