

Design and construction of network system management for the University of Economics and Business Administration. Application of ASA firewall management deployment using ASDM in ensuring network security.

Luc Van Hung

Abstract: This topic focuses on the design, construction, and management of a network system for the University of Economics and Business Administration. The main objective is to develop a solution for deploying ASA firewall management using ASDM to ensure effective network security. Through the research process, the topic applies a combination of theoretical and experimental methods. Expected results include enhancing information protection capabilities and strengthening access control to the university's network system.

Keywords: Network system, ASA firewall administration, network security, University of Economics, network management
