

Deploy group policy for the network system of VNPT Bac Kan IT center on Windows Server 2016 platform.

Nguyen Xuan Son

Abstract: In the constantly evolving context of information technology, optimizing network resource management has become an important requirement. This topic focuses on deploying Group Policy for the network system of the VNPT Bac Can IT Center on the Windows Server 2016 platform to ensure performance and information security. Through theoretical research combined with experimentation, the objective of the topic is to build an access management and automatic configuration system for computers in the internal network. The expected results of the topic will contribute to improving the quality of information technology services at the VNPT Bac Can IT Center, while also providing a model applicable to other units in the same field.

Keywords: Group Policy, Windows Server 2016, network management, information security, automatic configuration.
