

Design and Operational Configuration for the Network System of Vietnam National Reinsurance Corporation.

Nguyen Quang Vinh

Abstract: In the context of the rapid development of information technology, ensuring efficiency and safety in network system operations has become urgent for Vietnam National Reinsurance Corporation. This topic focuses on analyzing the current state of the existing network system and proposing solutions to optimize operational configuration. Through theoretical research combined with experimentation, the project aims to enhance the ability to meet the company's information needs as well as data security. Through the implementation process, the topic hopes to bring significant practical value in terms of technical and network system management.
