

Building human resource management software for Locifa Pharmaceutical Joint Stock Company

Hoang Tuan Anh

Abstract: In the current context, the demand for effective human resource management in pharmaceutical enterprises is increasingly high. This project aims to build a personnel management software system for Locifa Pharmaceutical Joint Stock Company, combining theoretical research and experimental implementation. The proposed method is based on business requirement modeling and intuitive user interface design. The project is expected to achieve the goal of optimizing work performance and improving the quality of human resource management, thereby contributing to the sustainable development of the enterprise.
