

Building a football team finder application on the Android platform

Tran Duy Duong

Abstract: This topic focuses on developing a mobile application that helps users easily search for and track information about football teams. The context for choosing this topic is based on the real needs of the football fan community to have an additional channel for quick information updates. The objective is to build an Android system capable of displaying detailed information about match schedules, match results, and team lineups. The research method applies a combination of software engineering theory and experimental application deployment. The expected results will bring great value to users and contribute to promoting the use of mobile technology in the sports industry.

Keywords: Android application, Find football team, Software engineering
