

Building a teaching management system for the Faculty of Multimedia Communication - University of Information and Communication Technology.

Trinh Van Duong

Abstract: This topic aims to meet the need for effective organization and management of teaching activities at the Faculty of Multimedia Communication - University of Information and Communication Technology. Through research, the topic identifies the goal of building a Learning Management System (LMS) integrated with modern tools to optimize the knowledge transfer process. The approach combines theory with experimentation to develop a solution suitable for the specific characteristics of the field. The project is expected to bring significant effectiveness in improving teaching quality and learning support.
