

Building an Online Math Quiz System for Dong Phuong Yen Primary School.

Tran Van Huy

Abstract: In the context of primary education increasingly focusing on the application of technology in teaching and learning, this topic aims to build an online math test system suitable for primary school students. The project's goal is to create an effective tool for assessing students' knowledge in math tests through online multiple-choice format. The research method combines theory on test system design with practical implementation at Dong Phuong Yen Primary School. The project hopes to contribute to improving educational methods and enhancing the effectiveness of assessing primary school students' mathematical abilities.
