

Building an online learning website system

Nong Van Khanh

Abstract: In the context of increasingly popular digital education, this topic focuses on building an online learning website system to meet the demand for flexible and effective learning. The objective of the research is to design and deploy a web platform that supports remote teaching and learning. The approach combines website design theory with system construction experimentation, including analyzing usage requirements, selecting appropriate technologies, and implementing necessary features such as course management, lectures, and interaction between teachers and students. The expected result is a high-quality web system that provides a useful solution for the education sector.
