

Research and application of performance testing using Jmeter tool for the Job Search website

Vu Thi Lua

Abstract: In the current digital era, job search websites play a crucial role in the recruitment process. This topic aims to evaluate the performance of several job search websites through testing using the JMeter tool. Through theoretical and experimental research, the topic provides results that help optimize the performance of web systems, ensuring an improved user experience while enhancing the website's responsiveness under high load conditions.

Keywords: Performance testing, JMeter, Job search website
