

Research on Android and building a music player application

Pham Van Nghia

Abstract: In the context of increasingly advanced digitalization, researching the Android mobile platform to build a music listening application has become an urgent need. This topic focuses on analyzing the technical characteristics of Android and designing a robust, user-friendly audio application system. Through a combination of theoretical research and experimentation, the project aims to provide an optimal solution for users to enjoy online digital music. The results of the topic not only contribute to improving user experience but also exploit the development potential of mobile applications in the audio field.

Keywords: Android, music player application, system design, technical analysis
