

Build a toy model selling website

Đinh Văn Tiến

Abstract: In the context of the increasingly developing online market, building a website specializing in selling toy models has become an undeniable trend. This topic aims to design and implement an e-commerce web system for toy model products, ensuring a user-friendly interface along with convenient payment capabilities. Through theoretical research combined with experimentation, the topic hopes to contribute an advanced technical solution that meets market demands and enhances customer experience. The project's results are not only highly applicable but also provide valuable knowledge for the field of information technology.

Keywords: Website selling toys, e-commerce, user interface, online payment
