

Building a beauty care application using Flutter Framework.

Le Manh Toan

Abstract: In the context of high demand for beauty care services and the development of mobile technology, this topic focuses on building a beauty care application system by applying the Flutter Framework. The goal is to create a comprehensive digital solution that helps customers manage and monitor their skin health condition effectively. Through a combination of theoretical research and experimentation, this topic not only provides features such as online consultation and skin condition alerts but also introduces an attractive user interface to enhance user experience. The expected outcome of this project is an application that can be widely used in the beauty care industry, contributing to technical advancement and significantly improving service quality for customers.
