

Building an internal management website for NAL Vietnam company

Tran Huu Toan

Abstract: In the context of the increasingly developing digital landscape, building an effective internal management website is necessary to enhance work performance and optimize the company's operational processes. This project aims to design and implement an internal web system for NAL Vietnam Company, focusing on providing solutions for information management, content dissemination, and supporting communication among members. The research methodology combines both theoretical and empirical approaches to ensure the applicability and effectiveness of the system. Expected results will bring significant improvements in work processes and strengthen inter-departmental connectivity, making an important contribution to the company's sustainable development.
