

Building a Nature Gallery

Vu Van Tri

Abstract: In the context of growing concern for environmental protection and community education about nature, this topic focuses on building a digital Nature Gallery system. The objective of the research is to create a visual and interactive learning tool, contributing to raising community awareness about biodiversity and natural environment conservation. The applied method combines theoretical research on digital system design with experimental deployment of applications on modern digital platforms. The expected results will be highly applicable, contributing to the development of non-traditional education and enhancing the nature exploration experience for the community.

Keywords: Nature Gallery, environmental protection, community education, biodiversity, digital
