

Building a sales website using the Laravel framework

Vy Nguyễn Tuấn

Abstract: Research and implementation of a website sales system based on the Laravel Framework to meet current online business needs. The project includes requirement analysis, designing a user-friendly interface, building a database, and implementing e-commerce functions. Through the development process, the system has demonstrated high capability in handling transactions quickly and securely. The research results contribute to promoting the development of web technology in Vietnam.

Keywords: E-commerce website, Laravel Framework, E-commerce
