

Building a website to introduce information technology and IT products.

Nguyen Van Tuan

Abstract: In the era of rapid digitalization, building a website specializing in technology and information technology products has become an essential need. This topic aims to provide comprehensive and up-to-date information on advanced technologies and the latest products in the IT field. The research method combines modern Web Design theory with the practical implementation of a highly interactive website. The expected results will bring significant value to the dissemination of technical knowledge, while also supporting effective decision-making in purchasing information technology products.
