

Build a sales website using Spring Framework

Nguyen Tuan Anh

Abstract: In the context of the strong development of e-commerce, building an online sales management system has become more important than ever. This topic focuses on designing and implementing a sales website using the Spring Framework as the main tool to optimize transaction processes. The goal of the research is to build a system that meets requirements for security, performance, and ease of product information management. The applied method includes studying the basic concepts of the Spring Framework combined with experimentation to implement the project. The expected results of this topic not only provide a robust sales management system but also contribute to the development of Java web applications.

Keywords: Spring Framework, E-commerce website, E-commerce, Management system, Security
