

Build a website for the Sao Viet phone store.

Nguyen Tien Binh

Abstract: This topic focuses on building an e-commerce web system to support the business operations of Sao Viet phone store. With the rapid development of information technology and the trend of online shopping, building a website is necessary to improve sales efficiency and customer experience. Through theoretical research and project implementation, the topic aims to provide a comprehensive solution with a user-friendly interface and easy administration functions. The results of the topic not only contribute to boosting revenue but also enhance the store's competitive position in the digital market.

Keywords: E-commerce website, Phone store, Information technology, Excellent - Sao Viet
