

Building a sales application for the YODY Thai Nguyen fashion store on the Android platform.

Pham Tien Binh

Abstract: In the increasingly developing fashion business context, this topic focuses on building a mobile application system to support management and sales for the YODY Thai Nguyen fashion store. The project applies a research method combining theory with experimentation, aiming to optimize the sales process and enhance customer experience through a convenient Android interface. The expected results of this topic not only improve business performance but also contribute to the development of e-commerce management technology in the local area.

Keywords: mobile application, fashion sales, store management, Android, intelligent system
