

Research on automated software testing and its application in Website testing.

Cử Mĩ Cậy

Abstract: This topic focuses on researching automated software testing methods with the goal of applying them to the website testing process. The context for selecting this topic stems from the necessity of automated testing technology to enhance efficiency and quality in web development. By approaching both theoretical research and experimentation, the topic aims to solve the problem of improving the website testing process through automated test scenarios. The expected result is to provide an effective automated testing system and contribute significantly to improving the quality of web services.

Keywords: Automated Testing, Software, Website Testing, Automation, Software Quality
