

Build a mask-selling website for the store "Thế giới khẩu trang Việt Nam" using the Laravel framework.

Nguyen Minh Chi

Abstract: In the context of the COVID-19 pandemic, managing and selling through websites has become crucial for businesses dealing in medical supplies. This project focuses on building an online mask sales management system for the store "Thế giới khẩu trang Việt Nam" (Vietnam Mask World). The objective is to design and deploy a website using the Laravel framework to optimize the purchasing process, enhance easy administration features, and meet diverse customer needs. Through a combination of theoretical research and practical experimentation, the project aims to contribute to improving business efficiency and providing modern technical solutions for the medical supplies retail sector.
