

Building human resource management software for FUNING PRECISION COMPONENT CO., LTD., Hong Hai Engineering Technology Group.

Ha My Dung

Abstract: In the current context, effective human resource management is an essential requirement for businesses. This topic focuses on developing human resource management software for FUNING PRECISION COMPONENT Co., Ltd., a subsidiary of Hong Hai Engineering Technology Group. The objective of the research is to address the problem of improving efficiency and dynamism in employee management through digital technology. The applied method combines theoretical research on human resource management systems with practical application deployment, including designing a user-friendly interface, integrating workflow automation functions, and managing employee information. The project is expected to bring significant efficiency to the company's operations while contributing to the development of the enterprise management software industry.
