

Building a website to support room rental search for students of Thai Nguyen University

Hoang Thuy Dung

Abstract: In the context of the increasing number of students needing to find accommodation in Thai Nguyen City, this project focuses on building a web system to provide an optimized solution for university students searching for rental rooms. The goal is to develop a specialized website that enhances user experience through a friendly interface and efficient search features. The research methodology includes collecting data from existing sources, analyzing user needs, and designing and implementing the system based on modern web technology. The project is expected to deliver a practical and useful solution for students and contribute to the sustainable development of the local educational real estate sector.
