

Building an online ordering application on Android phones

Trương Văn Dũng

Abstract: In the current context, the demand for using mobile applications for online shopping is increasing. This topic focuses on building an online ordering system based on the Android platform to meet the needs of individual users and businesses. The research method includes designing a user-friendly user interface (UI), integrating APIs from service providers, and deploying the application on mobile phones. It is expected that the completion of this topic will make a significant contribution to the field of mobile information technology and enhance the online shopping experience for users.
