

Building a system for collecting comprehensive information about cooking recipes.

Vo My Duyen

Abstract: In the modern context, accessing and managing cooking information has become more important than ever. This topic proposes building a system for collecting comprehensive information on cooking recipes to address the problem of users lacking accurate and up-to-date information. This system will use theoretical research methods combined with experimentation, providing users with a diverse and comprehensive source of cooking recipe information from various sources. The goal of the topic is to contribute to improving the ability to access and manage information in the culinary field, while expanding opportunities for scientific research and technological development for this industry.

Keywords: information collection system, cooking recipes, culinary research, information technology, data management
