

Build a fast food website using the Laravel framework.

Nguyen Van Duc

Abstract: This topic focuses on building a web system for selling fast food through the Laravel platform. In the context of the rapidly growing fast food market, creating an intuitive and user-friendly interface for customers is extremely necessary. The objective of this topic is to design and implement a fast food web system with features for order management, online payment, and delivery. The research methodology includes theoretical study of Laravel and related technologies combined with experimentation to develop the application. The expected result is the successful construction of a web system that optimizes business processes and enhances user experience.

Keywords: Laravel, order management, online payment, intuitive interface
