

Building a comprehensive information collection system on job interview tips

Nguyen Huy Hoang Hai

Abstract: In practice, the process of job searching and applying for new positions often faces difficulties due to a lack of useful information on how to interview effectively. This topic focuses on building a system to collect comprehensive information on job interview tips to support candidates in improving communication skills and increasing their chances of success during the interview process. Through theoretical research and experimental implementation, the system will provide users with a reliable source of information to best prepare for interviews. The expected results will bring significant practical value, contributing to improving the quality of the workforce in society.

Keywords: Information gathering system, job interview tips, communication skills
