

Building a note-taking application on the Android operating system

Phung Van Hanh

Abstract: In the modern context, managing and storing personal information is becoming increasingly important. This project aims to build a note-taking application on the Android platform to help users organize and access information more easily. Through a combination of theoretical research on mobile application design and practical source code development, this project seeks to provide an effective technical solution for users' diverse storage needs. The expected results of the project will not only contribute to the field of information technology but also enhance the user experience of mobile applications in the market.

Keywords: Android application, Note management, Mobile technology
