

Build an online food ordering website based on the AriKitchen model.

Nguyen Minh Hieu

Abstract: In the era of rapid digitalization, building an online shopping website for restaurants has become an inevitable trend. This topic aims to research and design an online food ordering system based on the AriKitchen model, meeting the needs of both customers and businesses in smart order management and transactions. The research process includes analyzing functional and non-functional requirements, designing a user-friendly interface for customers, and implementing the system using the Agile methodology. The goal of this topic is to create a solution that optimizes the online ordering process, enhances user experience, and improves restaurant operational efficiency.
