

Build a website to introduce and order computers for the Thai Hung Thinh store.

Nguyen Minh Hieu

Abstract: In the context of increasingly digital development, it is necessary to build an online information system to support the business operations of Thai Hung Thinh store. This project aims to design and deploy a professional website to introduce computer products and serve ordering. Through a combination of theoretical research and experimentation, the project will build a user-friendly interface and effective online shopping functions. The expected result is to create a technical solution that helps improve the store's business performance by expanding the potential customer market and enhancing the customer product experience.
