

Building a course management website for G.Smart English center with Java (JSP/Servlet).

Nguyen Van Hoan

Abstract: This topic aims to build a web-based course management system for G.Smart English Center, meeting the need to optimize teaching and management processes. Through research and experimentation with the Java programming language (JSP/Servlet), the topic hopes to provide an effective solution to enhance the quality of education and organizational administration at the center. The implementation of this system is expected to contribute to the development of online education and practical application programming skills.

Keywords: Management website, courses, Java (JSP/Servlet), English Center, Education Administration
