

Build a sales app on Android

Nguyen Van Manh

Abstract: This topic focuses on developing a mobile application for sales on the Android platform with the goal of meeting the efficient management and sales needs of small and medium-sized enterprises. Through research, market analysis, and user requirements, the topic applies a combined method of Android programming theory and experimental deployment to build a user-friendly interface system with capabilities for order management, inventory management, and online payment. The expected results of this project are not only a new technological solution for businesses but also a contribution to the development of the mobile application market in the e-commerce field.
