

Building an English vocabulary learning application on Android

Ngo Thi Kim Nhung

Abstract: In the context of increasing demand for international communication, this topic focuses on building an effective English vocabulary learning system on the Android platform. The goal of the research is to develop an application that helps users quickly accumulate and retain vocabulary through automated and personalized learning methods. The research methodology combines language learning theory with the practical development of a mobile application. The project is expected to deliver high learning efficiency and contribute to the digital education ecosystem.
