

Building an automatic question-answering system – answering inquiries of ICTU students.

Hoang Hong Quan

Abstract: This topic aims to exploit and build a multi-answer consultation system for students of the School of Information and Communication Technology (ICTU), addressing difficulties in knowledge exchange and answering questions. Through theoretical research combined with experimentation, the topic hopes to contribute a useful application solution to improve learning effectiveness and interaction among students. Expected results will include system design and practical testing at the school, evaluating the ability to meet student requirements.

Keywords: Consultation and inquiry system, information technology, ICTU University, online learning.
