

Build a musical instrument selling website using PHP and MySQL.

Giàng A Sà

Abstract: In the context of increasing online shopping demand, this topic focuses on building a website system specializing in selling guitars. This is a useful solution for both manufacturers and consumers. The project's goal is to design and implement this system using the PHP programming language and MySQL database to ensure high performance and stability. Through the process of research, application development, and testing, we hope to provide the market with a specialized e-commerce platform featuring a user-friendly and easy-to-use interface. This project not only contributes to the field of information technology but also supports the development of the music industry.
