

Build an online clothing sales application for Thanh Tú store on Android devices.

Vi Van Tham

Abstract: In the context of increasingly widespread digitalization, building an online clothing sales system has become important for traditional stores like Thanh Tú. This topic focuses on developing an Android mobile application to provide a comprehensive solution for online clothing trading. The objective of the research is to design and implement an online transaction system with efficient payment and inventory management features. The research methodology includes market demand analysis, user interface design, backend and frontend programming. Expected results will enhance customer experience as well as improve the store's business performance.

Keywords: Android application, online clothing sales, inventory management, online payment, transaction system
