

Building software for managing teaching assignments and calculating teaching hours for the University of Information and Communication Technology.

Ma The Thiem

Abstract: This topic aims to meet the need for optimizing the teaching assignment process at Universities of Information and Communication Technology (ICT). The objective of the research is to build a software system for managing teaching assignments and tracking teaching hours. The research method combines educational management theory with the practical implementation of software applications in a real environment. The topic aims to provide an effective solution for organizing and managing teaching, while contributing to improving the quality of training.

Keywords: Teaching assignment, Education management software, Teaching performance evaluation, Information technology, Academic management
