

Build a book-selling website using PHP

Phung Ngoc Thinh

Abstract: In the context of digitalization and the development of e-commerce, building a book-selling website system is necessary to meet the growing demand for online shopping. This project aims to design and implement a book-selling website using the PHP programming language. Through a combination of theoretical research and experimentation, the project seeks to provide an optimal technical solution for managing, displaying, and selling books online. The expected results will contribute to enhancing user experience while promoting the development of the digital publishing industry.

Keywords: Book selling website, PHP, e-commerce, content management, online business
