

Building an English multiple-choice test program on the Android platform

Trieu Quy Tho

Abstract: This topic focuses on developing an English proficiency assessment system through multiple-choice tests on the Android platform, aiming to meet the demands of modern learning and education. Through a combination of theoretical research and experimentation, the topic builds an effective mobile application that enhances the quality of testing and provides detailed evaluation information for users. The expected outcome of this topic is not only a new technological solution but also a significant contribution to the development of online education.

Keywords: Android, Multiple-choice test, Online education, Testing tool, English proficiency
