

Applying Machine Learning to build a Chatbot application

Nguyen Ngoc Hiep

Abstract: In the increasingly popular context of AI applications such as Chatbots in modern digital platforms, this topic focuses on applying Machine Learning to develop an intelligent chatbot system. The goal is to build a chatbot system capable of understanding and answering user questions with high accuracy. Through theoretical and experimental research, this topic will provide an effective solution for creating automated Chatbots, contributing to the development of AI technology in the field of online customer support.
