

Building a mobile phone sales website for Minh Vu Mobile store in Hanoi using HTML, CSS, JavaScript

Do Hoang Huy

Abstract: In the context of increasing digitalization in business, this project aims to build a professional website to support Minh Vũ Mobile store in selling mobile phones in Hanoi. By combining web design theory with practical implementation, we expect to create an effective technical solution. This project not only helps the store enhance its competitiveness but also contributes to research on the application of HTML, CSS, and JavaScript technologies in the electronics retail industry.

Keywords: Mobile phone sales website, Minh Vũ Mobile, Hanoi, HTML, CSS, JavaScript
