

Build a hotel management website for Garden Hotel Hanoi using .NET technology following the MVC model.

Pham Duc Thinh

Abstract: In the modern context with the strong development of information technology, building a hotel management system has become more important than ever. This project aims to design and implement a website for managing the Garden Hotel Hanoi based on the MVC (Model-View-Controller) model using .NET technology. Through the research and development process, the project combines theoretical methods with experimentation to ensure the high applicability of the system. The expected result is to create an effective hotel management solution, enhancing competitiveness and improving service quality for the Garden Hotel Hanoi.
