

Building a Sports News Introduction Website

Nguyen Thi Chinh

Abstract: In the context of increasingly widespread digitalization, building a website dedicated to sports news to provide fast and comprehensive updates for the audience has become extremely necessary. This topic focuses on analyzing user requirements, designing a user-friendly interface (UI), and optimizing the browsing experience. The research methodology includes both theoretical aspects of web content management (CMS) and the practical implementation of interactive features for the website. It is expected that building this website will significantly contribute to improving the efficiency of sports information delivery and enhancing the quality of user experience.

Keywords: Sports website, CMS, UI/UX, content management, web browsing experience
