

Research on some black-box testing techniques and their application in testing the Devwork Website.

Liều Thị Nhung

Abstract: This research aims to explore and evaluate black-box testing techniques, particularly in the context of website testing. The practical context has demonstrated the need for an effective testing system to ensure software quality. The main objective of the research is to build and implement testing methods suitable for the technical requirements of Devwork, in order to improve the ability to detect errors during website development. Through theoretical research combined with experimentation, the research aims to contribute to improving the quality of website testing and building an effective automated testing system.

Keywords: black box testing, Devwork Website, testing techniques, test automation, software quality management
