

Application of Sinnova software in office facility management at JVS Group Joint Stock Company.

Vu Thi Huyen Trang

Abstract: In the context of information technology development, the application of Sinnova software to effectively manage office facilities has become an urgent need. This project aims to research and deploy a management system based on the Sinnova software platform at JVS_JVS Group with the goal of optimizing space utilization, improving operational efficiency, and reducing management costs. The research methodology includes current status assessment, technical analysis, and experimental deployment. The expected results of the project will confirm the high applicability of Sinnova software in the corporate environment, contributing to advancing office management towards modernization.
