

Application of Microsoft Excel software in birth registration management at Trung Khanh Commune People's Committee, Van Lang District, Lang Son Province

Le Thi Tham

Abstract: In the context of increasingly complex population management, this topic focuses on applying Microsoft Excel software to enhance birth registration management efficiency at the Trùng Khánh Commune People's Committee. The research objective is to build an intuitive and easy-to-use management system to improve the birth registration process. The applied method combines both theoretical research and experimentation through analyzing local population indicators. Expected results from this topic include improvements in resident information management and the ability to forecast population growth trends, contributing to the administrative work of the Commune People's Committee.
